Booton Reservoir

Project Information

- **B & C FARMING LTD**
- **RESERVOIR CONSTRUCTION**
- **VALUE: £109,000**
- **SEPTEMBER 2013**

A J Morris were commissioned to construct a 15,000,000 Gallon Reservoir where we had to remove 500mm layer of topsoil and put in the outer embankment.

We excavated a 4m x 1.5m deep core trench into clay, to ensure all drainage was severed. We re engineered boulder clay in 250mm layers until the crest of the reservoir was reached.

Construction was completed within a month of first arriving on the site, converting a bare arable field into a manicured and smooth 6 acre reservoir.

The machinery that we used to complete the job;

- Caterpillar D8Ks
- Caterpillar 463G Scrapper
- Caterpillar D6T with GPS
- Tractor & Water Bowser
